

diamond kleen™

Eco-Friendly Glass Filtration Media for your Pool

Did you know that Diamond Kleen™ has anti-bio film properties that discourage bacteria and algae from breeding in your swimming pool filter tank.

Diamond Kleen™ is made from 100% recycled glass that acts as a healthier alternative to silica sand and zeolite. Diamond Kleen™ attracts no residue, so bacteria is unable to attach itself to the particles and breed within your filter tank; this is something sand cannot do.

Diamond Kleen™ can save up to 25% of water through reduced backwashing. Larger spaces between particles is what makes backwashing more efficient. Reduced backwashing means fewer chemicals are used, saving you money and reducing the amount of chemicals washed away into our eco-system.
